

PANDRUGS REPORT

Disclaimer: This report is intended for research use only and should not be used for medical or professional advice.

ID: vcf_corregido

Date: Sat May 16 2026 11:19:04 GMT+0200 (hora de verano de Europa central)

Analysis type: Small Variants

Tumour type: Lung

This report provides a summary and statistical overview of the results obtained from PanDrugs, as well as a complete list of the most promising drugs associated with the identified actionable variants and the supporting molecular evidence.

SUMMARY

DRUGS

"Best Candidate" drugs: **13**

Drug status: AP: **13**; CT: **0**; EX: **0**

Drug type: TT: **9**; CTx: **4**;

Top-5 drug families:

1. Unknown: **4** (AP: **4**, CT: **0**, EX: **0**)
2. K-Ras inhibitor(Cmap) [TT]: **1** (AP: **1**, CT: **0**, EX: **0**)
3. tubulin polymerization inhibitor(Cmap) [CTx]: **1** (AP: **1**, CT: **0**, EX: **0**)
4. MEK inhibitor(Cmap) [TT]: **1** (AP: **1**, CT: **0**, EX: **0**)
5. mTOR inhibitor(Cmap) [TT]: **1** (AP: **1**, CT: **0**, EX: **0**)

GENES

genes: **16**

genes in Pandrugs: **5**

ALL MOLECULAR EVIDENCES

SNVs: **2** (w. conseq: **1**, damaging: **2**, pathogenic: **1**)

BEST CANDIDATES

SNVs: **2** (w. conseq: **1**; damaging: **2**, pathogenic: **1**)

Legend: Drug status: Approved (AP), Clinical Trials (CT), Experimental (EX). Drug type: Targeted therapy (TT), Chemotherapy (CTx), Combination therapy (CbT), Hormone therapy (HT), Immunotherapy (IT), Photodynamic therapy (PdT), Other therapy (OT)

BEST CANDIDATE DRUGS IN PANDRUGS

Method: Patient's alterations (e.g. mutations, germinal variants, amplifications and deletions) and gene expression alterations are searched in PanDrugsDB and reported according to PanDrugs scores (see GScore and DScore), which combine clinico-biological gene relevance and susceptibility to treatment, reflecting the evidence level of the gene-drug association to the clinical evidence.

Table of results: In the following table, basic information of the patient's alterations with relevant clinical implications can be found. **Only the top best candidate drug-gene associations are reported in this report.** For a detailed evaluation it is recommended to access the full PanDrugs analysis results.

Legend: Direct target (DT), Biomarker(BM), Pathway member (PM), Genetic Dependency (GD), DrugScore (DS), GeneScore (GS).

Drug	Molecular evidences
------	---------------------

Drug	Status			Gene (Variant, Alteration / Association)
	Type	Response	Family	
Sotorasib	SOTORASIB is a drug approved by FDA that acts as an inhibitor of KRAS			KRAS (p.Ala146Val / DT);
	TT	Sensitivity	K-Ras inhibitor(Cmap)	
Docetaxel	Molecular alterations in KRAS are associated with response to DOCETAXEL, a drug approved by FDA Molecular alterations in MUC16 are associated with response to DOCETAXEL, a drug approved by FDA			KRAS (p.Ala146Val / BM); MUC16 (p.Tyr13584Ter / BM);
	CTx	Sensitivity	tubulin polymerization inhibitor(Cmap)	
Trametinib	Molecular alterations in KRAS are associated with response to TRAMETINIB, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	TT	Sensitivity	MEK inhibitor(Cmap)	
Everolimus	Molecular alterations in KRAS are associated with response to EVEROLIMUS, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	TT	Sensitivity	mTOR inhibitor(Cmap)	
Pembrolizumab	Molecular alterations in KRAS are associated with response to PEMBROLIZUMAB, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	TT	Sensitivity	Unknown	
Atezolizumab	Molecular alterations in KRAS are associated with response to ATEZOLIZUMAB, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	TT	Sensitivity	Unknown	
Bevacizumab	Molecular alterations in KRAS are associated with response to BEVACIZUMAB, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	TT	Sensitivity	Unknown	
Crizotinib	Molecular alterations in KRAS are associated with response to CRIZOTINIB, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	TT	Sensitivity	ALK tyrosine kinase receptor inhibitor(Cmap)	
Dabrafenib	Molecular alterations in KRAS are associated with response to DABRAFENIB, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	TT	Sensitivity	RAF inhibitor(Cmap)	

Doxorubicin	Molecular alterations in KRAS are associated with response to DOXORUBICIN, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	CTx	Sensitivity	topoisomerase inhibitor(Cmap)	
Gemcitabine	Molecular alterations in KRAS are associated with response to GEMCITABINE, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	CTx	Sensitivity	ribonucleotide reductase inhibitor(Cmap)	
Pemetrexed	Molecular alterations in KRAS are associated with response to PEMETREXED, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	CTx	Sensitivity	dihydrofolate reductase inhibitor(Cmap) and thymidylate synthase inhibitor(Cmap)	
Ramucirumab	Molecular alterations in KRAS are associated with response to RAMUCIRUMAB, a drug approved by FDA			KRAS (p.Ala146Val / BM);
	TT	Sensitivity	Unknown
